

1- Headings

how to give headings to markdown files. To give heading we use # symbol before the text and make sure to give the space between # and first word or letter. as you see below, increase the number of #s will decrease the size of heading. Further you can only make 6 heading(only use the 6# symbol.)

Heading 1

Heading 2

Heading 3

Heading 4

2- Blocks of Words

This is my first line in the markdown.

How separate the blocks?

To do this, press twice the Enter key. Additionally you make the special text by starting with the greater than > sign before the text/line.

```
> This is my first line of code.
```

```
> Write in markdown.
```

How to make single block?

To make single block you can separate the line with > sign

```
> This is my first line of code.
```

```
> Write in markdown.
```

3- Line break

I am learning the Python for Data Science. This is my second line.

How to give the line break?

```
simply utilize the backslash.
```

I am learning the Python for Data Science.

This is my second line.

4- Combine two things

block with headings

Heading 2

5- Face of words

There are two face of words, one is bold and other is italic

- For bold,italic and for both

you can use the double (**) sterick or double (__) underscore for bold the words and use the single for italic and use the three times around words for both bold anf italic

Bold

italic

Bold and Italic

6- Bullets point/List

make bullets by using the - sign with space between the sign and first letter. For the sub list or bullets use the tab key and than do same.

- Day1
 - Day1(a)
 - Day2(b)
- Day2
- Day3

using + **or** *

- Day1
- Day2

listing by number

1. Day
2. Day2
3. Day3

7- Line breaks and Page breaks

we do by using the */_/- three times.

This the page one

8- Links and Hyperlinks

<https://github.com/Muhammad-Hamdan92/Fundamentals-of-R-programming>

[Github link for the fundamental of R programming](#)

For learnig R basic click [Here](#)

9- Images and Figures with link

If in directory to ope the image by link click

Take out from online place (<--! This is task -->)

For online.....  pics

10- Adding codes or code of block

To print the name use `print("Muhammad Hamdan")`

```
print("Muhammad Hsmdan")
```

This is use the color from python.

```
x <- 3
y <- 7
z = x+y
print(z)
```

This is use the color from R.

```
x <- 3
y <- 7
z = x+y
print(z)
```

11- Adding the table

specie	petal_length	sepal_length
virginica	19	20
setosa	13	40
vericolor	29	40

if want to align on left do

specie	petal_length	sepal_length
virginica	19	20
setosa	13	40
vericolor	29	40

if i want to align on rigth

specie	petal_length	sepal_length
virginica	19	20
setosa	13	40
vericolor	29	40\

if i want to align middle

specie	petal_length	sepal_length
virginica	19	20
setosa	13	40
vericolor	29	40
